New tools for analyzing INN-Reach data

Ken Irwin, Wittenberg University, kirwin@wittenberg.edu

InnReachTracker : <http://www6.wittenberg.edu/lib/InnReachTracker/>

Current Version: 1.0.2c

Purpose: Takes III's separate monthly lists of title and call number data and provides a system in which to aggregate and analyze a growing body of INN-Reach data.

Features:

- Upload call number and title information exported from your catalog
- Connect call number and title information to see which books are borrowed frequently through INN-reach circulation
- Add local holdings data
- Customized to work with your local catalog and locally-defined patron types
- Limit by frequency or recency of circulation, LC class, or by patron type

Requirements:

- PHP 4+, MySQL
- written with Apache + Linux/Unix in mind, but may work in other environments
- Need to be able to edit a text file, and know a little bit about MySQL, but no programming is required.
- Having access to a system's administrator for the server will help

Usage:

1. **Export circ data from III's Web Management Reports.** You can only export last month's data, so this is a monthly process. Go to: **Coll Dev > INN-Reach Circulation** to export last month's title and call number data (see full documentation for more details.)
2. **Format the data in Excel.** (Eliminate headers and footers, add a date column in yyyy-mm-dd format.)
3. **Import title and call number data into InnReachTracker.** This can be done via the upload form in InnReachTracker, via phpMyAdmin or other web-based MySQL management interface, or through command-line MySQL queries.
4. **Use InnReachTracker to look up and record titles and local holdings info over time.**

See reverse side for a sample view.
